24-2R	190	60	-	-	35	8x8

Design Guide Summary

- The minimum turning radius (inside) is 2.2 times of belt width under all feasible belt Width, 2.5 times of belt width is the most optimal.
- The minimum straight run section near driving shaft and idling shaft of Radius belt must be 2 times of the belt width in length.
- The minimum straight run section between two turns of opposing direction must be 2 times of the belt width in Length.

Guide Rail & Wear Strips

- We have different kinds of guide rail and wear strips for your choice; for more information, please consult our sales team.

Support Mode of Insert Roller

- **Accumulation**

Wear Strips are placed between rollers for accumulation.

- **Multi-Speed**

Wear Strips are placed under the rollers and the speed of products on the belt will be 2 times of the belt speed.
